PROFESSIONAL SUMMARY

Results-driven **Full Stack Engineer** with 5+ years of hands-on experience building scalable, production-grade web applications across the **MERN/MEAN** stack, React.js, Next.js, Angular, and React-Native and the **.NET/C#** ecosystem. Proven expertise in architecting end-to-end systems, from Angular and ASP.NET Core enterprise platforms to Next.js, Node.js, and **AI-powered** products, with deep focus on performance optimization, cost-efficient architecture, and user-centric design. Track record of delivering production systems serving thousands of users with **99.9% uptime** and sub-200ms response times.

TECHNICAL SKILLS

Programming Languages: JavaScript, TypeScript, Python, C#, C++, SQL, HTML5, CSS3

Frontend Technologies: React.js, Next.js, Angular, React Native, Redux Toolkit, Zustand, Tailwind CSS, Bootstrap

Backend Technologies: Node.js, Express.js, ASP.NET Core, .NET, RESTful APIs, GraphQL, NestJS, Monolithic & Microservices Architecture

Databases: MongoDB, PostgreSQL, MySQL, Firebase, Redis, Pinecone (Vector Database)

DevOps / Cloud: Docker, Kubernetes, CI/CD Pipelines, GitHub Actions, AWS (EC2, S3), Vercel, Railway, Netlify, Heroku, Apache, Kafka

Testing & Automation: Playwright, Selenium, Puppeteer, Jest, Cypress, Unit & Integration Testing, Browser Automation

Methodologies & Tools: Agile, Scrum, Git, VS Code, Claude Code, Codex, Cursor, N8N, Jira, Postman, Figma, Linux, Ubuntu

PROFESSIONAL EXPERIENCE

Full Stack Engineer • TechUp.ai

Rawalpindi, Pakistan

April 2025 – June 2026

- Architected and delivered 25+ scalable web applications and APIs using MERN stack, Next.js, and TypeScript, serving 5,000+ active users with end-to-end solutions spanning RESTful APIs, GraphQL, multi-database backends (MongoDB, PostgreSQL, Firebase), microservices architecture, and automated CI/CD pipelines.
- Built high-performance dashboards integrating real-time analytics, RBAC, and third-party APIs (Stripe, SendGrid, Twilio), processing 100,000+ daily requests with 99.9% uptime and sub-150ms response times.
- Optimized application performance and infrastructure costs by 60% through database query optimization, Redis caching strategies, CDN integration, and Docker containerization, reducing cloud hosting expenses and improving page load times by 45%.
- Designed AI-powered features using OpenAI APIs and vector databases (Pinecone), including semantic search and automated workflows, enhancing user productivity by 80% and enabling new revenue streams for clients.

Web Developer • Webtechlo

Remote (Riyadh, KSA)

January 2024 – March 2025

- Developed 15+ full-stack web applications and e-commerce platforms for international clients using MERN stack, Next.js, and WordPress/WooCommerce, delivering projects 20% ahead of schedule through agile sprint planning.
- Built responsive, SEO-optimized websites achieving 95+ Google PageSpeed scores through performance optimization techniques including lazy loading, image compression, code splitting, and CDN integration, resulting in 40% faster page load times and improved search rankings.
- Created custom dashboards and payment integrations (Stripe, PayPal) using React.js and Redux Toolkit, enabling clients to process 10,000+ monthly transactions and track real-time analytics with secure, scalable architecture.
- Implemented CI/CD workflows using GitHub Actions and Vercel, reducing deployment time by 70% and ensuring consistent staging/production parity across Docker containerized environments with automated testing and rollback capabilities.

EDUCATION

Bachelor of Science in Information Technology

Virtual University — Rawalpindi, Pakistan

Relevant Coursework: Programming, Object-Oriented Programming (OOP), Operating Systems, Databases, Software Engineering, Computer Networks.

PROJECTS

Placeyo — AI-Powered Job Application Automation System

Tech Stack: Next.js, Node.js, Firebase, Pinecone, OpenAI, RAG, Browser Automation, CI/CD | **Link:** placeyo.com

- Architected and developed a full-stack job automation platform with a **Next.js** web app (dashboards, subscriptions, analytics) and a Node.js microservices backend handling 60,000+ daily job listings across 30+ recruitment portals with 99.9% uptime.
- Built scalable backend infrastructure using Firebase Firestore, RESTful APIs, and Pinecone vector database for job matching, serving 10,000+ active users with real-time tracking, automated applying, and AI-generated cover letters.
- Reduced operational costs by 90% through optimized API usage, intelligent caching, and batch processing, while implementing browser automation to handle complex multi-country application forms with automatic retry and error logging.
- Integrated payment gateway for tiered subscriptions, developed admin dashboards for user and platform analytics, and deployed the system on Vercel with CI/CD pipelines, achieving sub-200ms API response times and zero-downtime updates.

PharmaPOS — Enterprise Pharmacy POS & Inventory Management System

Link: github.com/hussainislive/Pharma-POS

Tech Stack: Angular, TypeScript, ASP.NET Core, C#, PostgreSQL, EF Core, SignalR, Tailwind CSS, Playwright, JWT

- Architected a production-grade modular monolith featuring **FEFO-based** batch inventory tracking, prescription approval workflows, real-time SignalR stock sync, and automated sales analytics.
- Engineered robust security and data integrity utilizing ASP.NET Identity with JWT rotation, HttpOnly refresh cookies, granular RBAC, immutable audit trails, and concurrency/idempotency controls for transactions and refunds.
- Developed a responsive Angular frontend with backend-authoritative pricing and stock validation, ensuring full reliability through unit, integration, API, and Playwright end-to-end testing suite.

GO Marketplace — Full-Stack Classified Ads Marketplace

Link: go-marketplace-rouge.vercel.app

Tech Stack: React 19, Node.js, Express, PostgreSQL, Prisma, TypeScript, Redux, TanStack Query, Socket.io, WebRTC, Redis

- Built a production-ready classified ads marketplace with real-time messaging using Socket.io for text/media chat and WebRTC for peer-to-peer voice messaging, enabling low-latency, media-rich buyer-seller communication.
- Designed a scalable PERN-stack backend with Prisma ORM, PostgreSQL, and Redis caching, deployed across Vercel and Heroku, with JWT + Google OAuth authentication and Cloudinary-powered image optimization.
- Engineered a responsive React 19 frontend using TanStack Query for efficient data fetching/caching and Redux for state management, achieving fast load times and smooth real-time UI updates.

AbundantVisas — Immigration Consultation Platform

Tech Stack: Next.js, Node.js, PostgreSQL, Express.js, React.js, Redis, Socket.io, OpenAI, CI/CD | **Link:** abundantvisas.com

- Developed a full-stack immigration consultation platform with AI-powered chatbots using **RAG** and Firebase vector search, providing instant visa answers with 85% accuracy and reducing consultant workload by 60%.
- Built real-time client consultation system using Socket.io and Firebase, enabling live chat with message history, file sharing, and notifications, alongside dashboards for user tracking, application management, and payment integrations.
- Developed dashboards for user, application, and client tracking with real-time updates and secure RESTful payment integrations, leveraging PostgreSQL and Redis for performance optimizations that improved Speed Index and data retrieval efficiency.

Musically — Cross-Platform Offline Media Player

Link: github.com/hussainislive/musically

Tech Stack: React Native, Expo, TypeScript, WatermelonDB, RN TrackPlayer, RN Video, Zustand

- Built a full-featured offline media player for **iOS** and **Android** with local-first CRUD operations powered by **WatermelonDB**, supporting multiple audio/video file formats with auto-generated thumbnails and metadata extraction.
- Implemented advanced media controls including background audio playback, lock-screen and notification panel controls, Picture-in-Picture mode, subtitle rendering, and gesture-based navigation (swipe, pinch, double-tap seek).
- Optimized list performance via visible-only thumbnail throttling and **Shopify FlashList**, ensuring responsive rendering speeds of 200–400ms during fast scroll interactions.
