PROFESSIONAL SUMMARY

Results-driven Full Stack Engineer with 5+ years of hands-on experience building scalable, production-grade web applications and mobile solutions. Proven expertise in architecting end-to-end systems using MERN stack, Next.js, and emerging technologies including AI/vector databases. Experienced in developing for global and Middle East markets with focus on performance optimization, cost-efficient architecture, and user-centric design. Track record of delivering production systems serving thousands of users with 99.9% uptime and sub-200ms response times.

TECHNICAL SKILLS

Programming Languages: JavaScript, TypeScript, Python, SQL, C, C++, HTML5, CSS3

Frontend Technologies: React.js, Next.js, React-Native, Redux Toolkit, Zustand, Tailwind CSS, Bootstrap

Backend Technologies: Node.js, Express.js, RESTful APIs, GraphQL, NestJS, Microservices Architecture

Databases: MongoDB, PostgreSQL, MySQL, Firebase, Redis, Pinecone (Vector Database)

DevOps / Cloud: Docker, CI/CD Pipelines, GitHub Actions, AWS (EC2, S3), Vercel, Railway, Netlify, Heroku

Automation & Testing: Playwright, Puppeteer, Selenium, Web Scraping, Browser Automation

Tools & Technologies: Git, VS Code, Claude Code, Cursor, Jira, Postman, Figma, Linux, Ubuntu, WordPress

PROFESSIONAL EXPERIENCE

Full Stack Engineer · TechUp.ai

Rawalpindi, Pakistan

April 2025 – Present

- Architected and delivered 10+ scalable web applications using MERN stack and Next.js, serving 5,000+ active users with end-to-end solutions spanning RESTful APIs, multi-database backends (MongoDB, PostgreSQL, Firebase), and automated CI/CD pipelines.
- Built high-performance dashboards integrating real-time analytics, RBAC, and third-party APIs (Stripe, SendGrid, Twilio), processing 100,000+ daily requests with 99.9% uptime and sub-150ms response times.
- Optimized application performance and infrastructure costs by 60% through database query optimization, Redis caching strategies, CDN integration, and Docker containerization, reducing cloud hosting expenses and improving page load times by 45%.
- Designed AI-powered features using OpenAI APIs and vector databases (Pinecone), including semantic search and automated workflows, enhancing user productivity by 80% and enabling new revenue streams for clients.

Web Developer · Webtechlo

Remote (Riyadh, KSA)

January 2024 – March 2025

- Developed 15+ full-stack web applications and e-commerce platforms for international clients using MERN stack, Next.js, and WordPress/WooCommerce, delivering projects 20% ahead of schedule through agile sprint planning.
- Built responsive, SEO-optimized websites achieving 95+ Google PageSpeed scores through performance optimization techniques including lazy loading, image compression, code splitting, and CDN integration, resulting in 40% faster page load times and improved search rankings.
- Created custom dashboards and payment integrations (Stripe, PayPal) using React.js and Redux Toolkit, enabling clients to process 10,000+ monthly transactions and track real-time analytics with secure, scalable architecture.
- Implemented CI/CD workflows using GitHub Actions and Vercel, reducing deployment time by 70% and ensuring consistent staging/production parity across Docker containerized environments with automated testing and rollback capabilities.

PROJECTS

Placeyo — AI-Powered Job Application Automation System

Tech Stack: Next.js, Node.js, Firebase, Pinecone, OpenAI, RAG, Browser Automation, CI/CD | **Link:** placeyo.com

- Architected and developed a full-stack job automation platform featuring a Next.js web application with user dashboards, subscription management, and analytics, alongside a Node.js microservices backend handling 60,000+ daily job listings across 30+ international recruitment portals with 99.9% uptime.
- Built scalable backend infrastructure using Firebase Firestore, RESTful APIs, and Pinecone vector database for job matching, serving 10,000+ active users with real-time application tracking, automated job applying, and custom generated cover letters.
- Reduced operational costs by 90% through optimized API usage, intelligent caching strategies, and batch processing, while implementing browser automation workflows to handle complex application forms across multiple countries with automatic retry mechanisms and comprehensive error logging.
- Integrated payment gateway for tiered subscription plans, developed admin dashboards for user management and platform analytics, and deployed the entire system on Vercel with CI/CD pipelines, achieving sub-200ms API response times and seamless zero-downtime updates.

AbundantVisas — Immigration Consultation Platform

Tech Stack: Next.js, Node.js, PostgreSQL, Express.js, React.js, Redis, Socket.io, OpenAI, CI/CD | **Link:** abundantvisas.com

- Developed a full-stack immigration consultation platform featuring AI-powered chatbots using Retrieval-Augmented Generation (RAG) with OpenAI and Firebase vector search, providing instant answers to visa queries with 85% accuracy and reducing consultant workload by 60%.
- Built real-time client consultation system using Socket.io and Firebase, enabling live chat between consultants and clients with message history, file sharing, and notification support, alongside comprehensive dashboards for user tracking, application management, and payment integrations.
- Developed dashboards for user, application, and client tracking with real-time updates and fully secure RESTful payment integrations, leveraging PostgreSQL and Redis to execute platform-wide performance optimizations that significantly improved Speed Index and data retrieval efficiency.

GO Marketplace — Full-Stack Classified Ads Marketplace

| **Link:** go-marketplace-rouge.vercel.app

Tech Stack: React 19, Node.js, Express, PostgreSQL, Prisma, TypeScript, Redux, TanStack Query, Socket.io, WebRTC, Redis

- Built a production-ready classified ads marketplace with real-time messaging using Socket.io for text/media chat and WebRTC for peer-to-peer voice messaging, enabling low-latency, media-rich buyer-seller communication.
- Designed a scalable PERN-stack backend with Prisma ORM, PostgreSQL, and Redis caching, deployed across Vercel and Heroku, with JWT + Google OAuth authentication and Cloudinary-powered image optimization.
- Engineered a responsive React 19 frontend using TanStack Query for efficient data fetching/caching and Redux for state management, achieving fast load times and smooth real-time UI updates.

Musically — Cross-Platform Offline Media Player

| **Link:** github.com/hussainislive

Tech Stack: React Native, Expo, TypeScript, WatermelonDB, RN TrackPlayer, RN Video, Zustand

- Built a full-featured offline media player for iOS and Android with local-first CRUD operations powered by WatermelonDB, supporting multiple audio/video file formats with auto-generated thumbnails and metadata extraction.
- Implemented advanced media controls including background audio playback, lock-screen and notification panel controls, Picture-in-Picture mode, subtitle rendering, and gesture-based navigation (swipe, pinch, double-tap seek).
- Optimized app performance through efficient local database queries and lazy-loaded media rendering, delivering a smooth, ad-free, privacy-focused experience used daily in production for 3+ months.

EDUCATION

Bachelor of Science in Information Technology

Virtual University — Rawalpindi, Pakistan

Relevant Coursework: Programming, Object-Oriented Programming (OOP), Operating Systems, Databases, Software Engineering, Computer Networks.

LANGUAGES

English: Fluent

Urdu: Native

Arabic: Elementary proficiency
